

## 1.Executive summary (one page about the project)

### Evolution of Watershed Development

Watershed development approach has evolved with passage of time gradually from initial objective of soil and water conservation and reducing siltation of river valley projects to the current integrated approach of managing the biological, physical, and social elements in landscape within a watershed's boundaries. Climate change issues and its impacts witnessed in the recent past have adversely impacted ecology in general and agricultural production systems in particular, posing grave challenges to sustainable livelihoods, especially for vast majority of people in India who are directly or indirectly dependent on agriculture.

### Objectives of Watershed Development Projects

At watershed level, the development plan shall be guided by the need to achieve higher incomes for farmers, expanded livelihood option for landless, equity in distribution of benefits, community ownership and management, and ecologically sustainable action plan.

- a) Secure production and farmers' income against climatic variability and its risks of drought spells through diversification of crop systems and animal husbandry, and varied livelihood portfolios, efficient water harvesting and retention of rainwater in soil (ridge) and entitling all project members to ground and surface water resources for life saving irrigation on equitable basis.
- b) Increase intensity and productivity of various crops, livestock, fisheries, and biomass production systems through optimal, integrated, sustainable and efficient use of natural resources in project areas.
- c) Reconcile the stake of non-land holding project members and promote alternate livelihood opportunities.
- d) Build an ecosystem of enterprises for facilitate efficient scales of operations, access to credit, and market linkages; knowledge sharing; and resource convergence led by vibrant member managed farmers' institutions.

Ecological restoration and sustainable management of natural resources across the project area through:

- a) Sustained community action in management of natural resources/biomas such as groundwater, soil, community resources, etc. In view of building community organizations like User Group (UG) and transferring maintenance responsibilities to them. Further, subordinate UGs with regulatory norms, that are institutionalized through the Gram Panchayats.
- b) Promotion of simple, easy to use and affordable technologies and practices, that builds upon local knowledge and available materials.

Improving the economic and social conditions of the resource poor, social less, differently abled and women in particular through:

- a) Shared and equitable access to the land, water and biomass resources developed.
- b) Greater access to income generating opportunities.
- c) Facilitate co-option of members of these categories in various community institutions i.e. FPO, User Groups etc.

## 1. Introduction and General description about project area

S. No.	Proposed Microwatershed code ( 8 digit code)	Name of the GPs covered	Name of the Villages under each GP	Geographical Area of the village	Total Reserved forest area	Project area (7-5-6)	Total untreatable area (area under assured irrigation, & uncultivable waste land and habitations)	Total treatable wasteland area (ha.)	Total rainfed agricultural area (ha.)	Total area proposed for treatment (11- 9+10 or 7-8)	Forest area taken up for development out of column 11 (ha)
