1.Executive summary (one page about the project)

The coastal district Udupi of Karnataka State falls along the west coast of peninsular India and is separated from the rest of peninsula by towering high Western Ghats. Brahmar watershed () situated in Udupi Taluk and Udupi District with total area of 4753.76 ha, comprises of four micro watershed with the total treatable area of 4749.47 ha. It is 30 KM away from the taluk head quarters and 30 KM away from district head quarters Udupi. The area is spread over 8 villages namely Haluvalli, Hosoor, 38 Kalatturu, Kenjoor, Nalkoor, 34 Kudi, Pejamanguru and Cherkady, fall under four Grama Panchayath namely Karje, 38 Kalathuru, Kokkarne, Nalkoor. Brahmar sub watershed consists of 8 Micro watersheds namely Haluvalli 5A3B7G2c, 5A3B7G2d, Hosoor 5A3B7G1b, 5A3B7G1c, 5A3B7G1d, 5A3B7G2b, 5A3B7G2c, 5A3B7G2d, 38 Kalathuru 5A3B7G1a, 5A3B7G1b, Kenjoor 5A3B7G1b, 5A3B7G1c, 5A3B7G1d, 5A3B7G2a, 5A3B7G2b, 34 Kudi 5A3B7G2a, 5A3B7G2b, 5A3B7G2d, 5A3B7G2e, Pejamanguru 5A3B7G2b, 5A3B7G2d, 5A3B7G2e, Nalkoor 5A3B7G1a, 5A3B7G1b, 5A3B7G1c, 5A3B7G2a, Cherkady 5A3B7G2d, 5A3B7G2e.

The area covered with two types i) red lateritic soil, is the most dominant soil type in the area ii) sandy loamy soils, are transported from origin and are found mostly along river banks and lower reaches of valleys. This soil type is very well suited for irrigational practices.

1.Introduction and General description about project area

The area is essentially an agricultural district with more than 70 % population depends on agriculture for their livelihood where as only 60 % of the available land is used for agriculture. Rest is either forest land or land unsuitable for agriculture.

Agriculture is by and large confined to the traditional kharif cultivation depending on the monsoon. Paddy is the main crop raised by 75 % of the cultivated area in kharif season. The other crops are chillies, sweet potato and vegetables. In Rabi season, paddy, chillies, black gram and green gram, horse gram are raised. Pulses are raised during dry season. Plantation crops include coconut, cashew nut, banana, areca nut and pepper. Predominantly mono cropping is being practiced followed by mixed cropping in sum of the areas. As the area experiences, heavy rain falls most of the surface fertile soils gets washed away in toivers. The foothills are deforested, run off velocity is so fast that opportunity of infiltration is very less. Low organic contents further reduce moisture holding capacity of the soils. This also result in leaching of calcium and phosphorus from the soils, low organic content further reduce nutrient absorption of these soil leading to low productivity. The residents of the area are land less, small and marginal farmers, migration

of residents to other states seeking employment is a common phenomenon. To avoid such migration and down trodden people are important factors where the project has to look into.

Availability of safe drinking water is seen in the area, is a boon to the whole district as well. But in a long run restore the safe level of ground water table to fulfill year round drinking water and to increase the productive irrigation area is one of the important parameter the project is planned for. There is a lot of scope to improve the biomass production through the horticulture and agro forestry programme and also to improve the livelihood of farmers by the supplementary income from these two sectors. With the co-ordination of department and the CBOs implementation of the income generating activities and production systems will also serve the employment.
